RECOVERY INTELLIGENCE / POLICY & SETTINGS

Policy & Settings

AI Agent Online

PM

The safety layer controls the AI.

The AI agent can recommend an action, but these deterministic rules decide whether it is allowed to execute.

Recovery safety policy

Deterministic rules always override the agent

Maximum recovery attempts

3

High-value review threshold (₹)

50000

Minimum recovery probability

0.45

High-value human review

Transactions above ₹50,000 cannot be auto-recovered.

ON

Duplicate-action protection

Already recovered cases cannot receive another intervention.

ON

Refund / payout actions

Excluded from the allowed action set.
